

## Behind in processing GIDEP parts data?

### Introducing P3 Parts Manager for GIDEP

Corent's P3 Parts Manager for GIDEP is designed to give you complete, flexible control over the intersection of Parts data, Processes, and People. With our automation tools, you can maximize the value of GIDEP.

### Problems with Parts Data Management

When it comes to vital GIDEP parts data, the impact on a complex, high-value product can be tremendous.

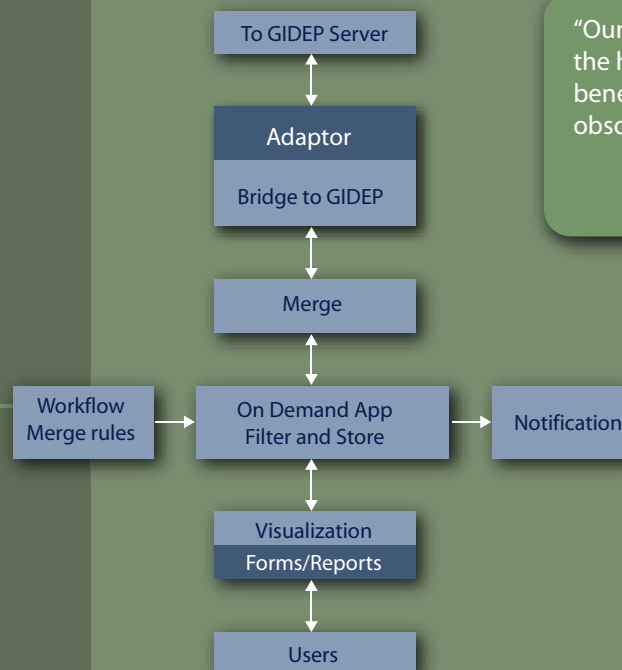

It's always challenging to capture the meaning of every piece of data from multiple sources and make sure it gets the attention of key people while flowing into critical processes.

Do your skilled engineers spend hours a week parsing GIDEP pushmails, manually scanning for parts relevant to your BOMs, matching external to internal part numbers, and deciding who needs to be notified about each new issue?

### How it works

Built upon Corent's powerful application development platform, Corent P3 for GIDEP will automatically process incoming GIDEP data, match it against your BOMs, merge information according to your workflow rules into a database with live links to GIDEP documents, and automatically notify the proper individuals.

Config Part Type	Imported Mfr. Part Number	GIDEP Updates	Relation	Document Date	GIDEP Entry Date
Microcircuit	IDT49FCT3805AQ	Show updates	GIDEP Entry Data	06/06/2006	06/07/2006
Microcircuit	LM29C1D	Show updates	GIDEP Entry Data	03/08/2006	03/13/2006

"Our Industry needed a better way to automate the handling of GIDEP data to capture the sizable benefits of cost avoidance, process improvement, obsolescence and product quality."  
 ~ Jim McDonald, CEO, DeMAC Enterprises, Inc.

## Manually filling gaps in parts management systems?

### Application Highlights

**P3 for GIDEP is feature-rich to enable you to get maximum value from GIDEP parts data.**

- Secure, native browser-based application needs no client installation and provides real-time data
- Track all GIDEP information and relate it to internal part numbers, BOMs, workflows, users
- Single point of control for product notices, DMSMS and obsolescence info, failure data, etc.
- Follow downstream-effects on systems and subsystems that employ a given part
- Reverse-query to determine which BOMs have parts with GIDEP notices that apply to them
- Provide a bridge to link GIDEP data to existing databases and parts management systems

### Customization is easy with Corent

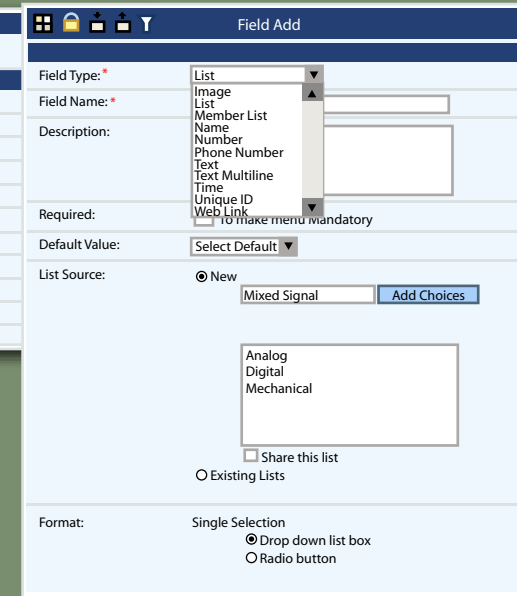

**We recognize that no two installations are exactly alike. That is why P3 for GIDEP is designed to give you control.**

- Edit any field or even add fields that you define, using a rich set of field types (including images, web links, documents, and more).
- Create custom database filters, screen layouts, and powerful event triggers. No programming is ever required
- Able to handle major customizations, Corent's engineers complete jobs in days, not months

### Hosting options

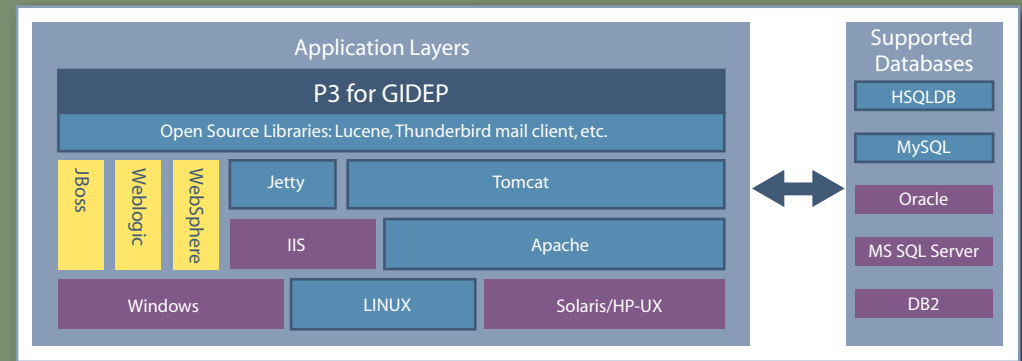

**When you work with Corent, you have options. We support two ways to host P3 for GIDEP:**

- Use your own internal server
- or -
- Get up and running instantly with Corent's secure, fully-hosted ASP Solution

*"Conventional techniques are very costly and labor intensive with no ability to customize internal reports and notification. Corent has developed their flexible P3 technology, creating a powerful, cost effective solution."*

*~ Jim McDonald, CEO, DeMAC Enterprises, Inc.*
